PROFESSIONAL SUMMARY

Mid-level software engineer with Microsoft experience building and supporting production, customer-facing web applications. Strong in React, TypeScript, C#, Python, automated testing, Azure DevOps, Agile delivery, PR/code review, and cross-functional collaboration with product, UX, and engineering partners.

TECHNICAL SKILLS

Languages & Web: TypeScript, JavaScript, React, HTML, CSS, C#, Python, C++

Backend, Cloud & Tools: Azure, Azure DevOps, Git, GitHub, Visual Studio, Visual Studio Code, CI/CD workflows, automated unit testing

Engineering Practices: Production web applications, front-end architecture, service reliability, code reviews, Agile Scrum, user stories, estimates, on-call support, technical debt reduction, stakeholder collaboration

EXPERIENCE

Software Engineer, Microsoft

Jan 2024 - Present

- Lead engineer and product owner for the Outlook Quarantine page front end, owning UI/UX direction for a production security experience within Microsoft Defender for Office 365.
- Build, maintain, and support customer-facing web features using React, TypeScript, C#, Git, Azure DevOps, Visual Studio, and Visual Studio Code, with emphasis on usability, reliability, and maintainability.
- Collaborate with product managers, UX partners, and engineers to scope features, evaluate tradeoffs, decompose work into user stories, estimate effort, and release improvements through Agile Scrum processes.
- Review code and coordinate implementation across teams, including supporting an international engineering group through knowledge sharing, technical context, and consistent delivery standards.
- Contribute to service quality through debugging, on-call support, incident coordination, and engineering improvements that reduce regression risk and improve long-term developer experience.

Software Engineering Intern, Microsoft

Summer 2023

- Identified a gap in automated coverage for a C# service and redirected internship work from feature implementation toward strengthening unit tests and regression protection.
- Expanded service-level test coverage to reduce redundant behavior, prevent breakage during future code changes, and improve confidence in the release process.

Software Engineering Intern, Microsoft

Summer 2022

- Supported Azure capacity services in a Python-based environment, writing automated unit tests for cloud service logic to improve reliability and reduce regression risk during code changes.

Teaching Assistant, Montana Technological University

Throughout College

- Supported Fundamentals of Programming and Data Structures & Algorithms courses for roughly 25-50 students, teaching Python, C++, debugging, and core software engineering concepts.
- Created a GitHub lab to help students learn version control through practical exercises; graded assignments and explained technical concepts in multiple ways to improve comprehension.

EDUCATION

Eastern University | Master of Business Administration (MBA), Organizational Management - Focus in Project Management | *Expected Jul 2027*

Montana Technological University | Bachelor of Science in Computer Science - Minors: Business Administration, Statistics, Mathematics, Data Science | *Dec 2023*
