PROFESSIONAL SUMMARY

AI-focused full stack software engineer with Microsoft production experience owning React/TypeScript UI for Outlook Quarantine within security.microsoft.com. Strong in front-end architecture, Fluent UI, C#/.NET REST API integration, telemetry with Kusto/KQL, accessibility, performance, automated testing, Azure DevOps, on-call support, and AI-assisted engineering workflows for faster, maintainable delivery.

TECHNICAL SKILLS

Languages & Web: TypeScript, JavaScript, React, Node.js, HTML, CSS, C#, Python, C++, SQL, KQL

Frontend & UX: Fluent UI, Microsoft internal design systems, component design, REST API integration, accessibility, telemetry-driven UX, performance optimization

Backend, Data & Cloud: .NET/C# services, REST patterns, Cosmos DB, Kusto, SQLite, Azure, Azure DevOps, ECS deployment, Git, GitHub

Testing & Reliability: Jest, Playwright, qTest, unit testing, regression prevention, on-call triage, customer escalations, outage mitigation, RCA

AI Engineering: Microsoft Copilot, GitHub Copilot, Claude, Codex/CLI workflows, AI-assisted debugging, test generation, PR summaries/reviews, implementation planning

EXPERIENCE

Software Engineer, Microsoft	January 2024 - Present
- Own Outlook Quarantine front end within security.microsoft.com, a React/TypeScript experience in a large platform/repo serving millions of daily users. - Lead UX components, API integration, telemetry, accessibility, testing, and performance for customer-facing Microsoft Defender for Office 365 workflows. - Build Fluent UI and internal-component experiences that consume C#/.NET REST APIs backed by Cosmos DB and Kusto; contribute C# fixes for front-end related issues. - Implemented support for quarantined password-protected attachments, including password-entry/view flows, API handoff, scan-state handling, and user-facing resolution states. - Improved diagnostics and supportability by adding telemetry TagIds, writing KQL queries, and creating dashboards to track usage metrics, bugs, and escalation patterns. - Reduced page load time and authorization overhead by optimizing RBAC checks and front-end/API interaction patterns; improved accessibility and reduced customer escalations. - Apply AI-assisted engineering tools for code generation, debugging, test creation, PR preparation/review, design planning, and user story/task breakdown while maintaining human validation. - Review front-end PRs, triage on-call issues, support outage mitigation and root cause analysis, mentor a vendor engineer, and partner with PM/EM/design on technical feasibility.	
Software Engineering Intern, Microsoft	Summer 2023
- Identified a gap in automated coverage for a C# service and redirected internship work from feature implementation toward service-level unit tests and regression protection. - Expanded test coverage to reduce redundant behavior, prevent future breakage, and improve confidence in release validation.	
Software Engineering Intern, Microsoft	Summer 2022
Supported Azure capacity services in a Python-based environment, writing automated unit tests for cloud service logic to improve reliability during code changes.	
Teaching Assistant, Montana Technological University	Throughout College
Taught Python, C++, debugging, data structures, algorithms, and Git/GitHub workflows to 25-50 students; created a hands-on GitHub lab and graded technical assignments.	

TECHNICAL PROJECT

Personal Website, william-augustine.com	2026
- Built and published a TypeScript, HTML, CSS, and Fluent UI portfolio site hosted on Cloudflare with public source code on GitHub. - Implemented an interactive bug reporting flow that submits reports and sends automated email notifications; planning future AI chatbot/back-end integration.	
GitHub Basics Lab, https://github.com/WillAugustine/MontanaTech-CSCI232	2023
- Created a lab from scratch covering the GitHub basics to be taught in Montana Technological University's CSCI 232 class - Lab covering forks, cloning, README.md files, making changes locally, creating .gitignore files, and pushing/merging changes in GitHub	

EDUCATION

Eastern University - MBA, Organizational Management Focus: Project Management	July 2027
Montana Technological University - B.S. Computer Science Minors: Business Administration, Statistics, Mathematics, Data Science	December 2023
